

# FlexiCleanTool

Manufactured by Lateral the FlexiClean rotary cleaning tool has gained a strong market presence for marine growth cleaning applications. The patented blade is made with soft nonabrasive materials that stick to and pull marine growth from the surface area, removing it without causing damage.

The Standard FlexiClean is designed for a WorkClass ROV and is the fastest and most versatile cleaning tool available. Three layers of four fingers and a custom hydraulic drive unit makes this unit the tool of choice for many of the major subsea operators and contractors.
