

RQ-022-3.2 – Hydraulic Fluid Compensators

Key Features:

- Flexible Mounting options.
- Can be connected in a series for increased volume.
- Level Sensor Options.
- Pressure Relief Valve.

WHATS INCLUDED

Compensator
Operations Manual
Certificate Pack

OPTIONS

Spares Kit
Level Sensor

Description

Our compensators are designed to have a small footprint with ease for mounting. With built in Heli-coils on each side of the main body the compensator can be mounted without any additional bracketry.

They are designed to provide submerged vehicles with a positive pressure of incompressible fluid to protect them against seawater ingress.

Built with a corrosion resistant plastic and with the option of a level sensor these units are ideal for compensating ROV system components.

Our standard unit is 3.2Litres however we can provide tailored solutions if required.

Overall Specifications	
Weight in Air	8kgs (empty) 11.5kg (Full)
Weight in Water	5.5kg Full
Dimensions	L308 x W194 x H194mm
Max Pressure	15 PSI
Volume	3.2L
Hydraulic Ports	
Fill	4 JIC
Bleed	4 JIC
Pressure Out	8 JIC
Blanked	2 x 3/8" BSP & 3 X 1/2" BSP
